

AMENDMENTS TO THE CLAIMS:

1. (Currently amended) An internal arrangement of a computer, which clears a heat dissipation channel between a second access unit including a floppy drive and a compact disk drive and a motherboard by changing an allocation of a first access unit, comprising:

a case including a bottom portion with the motherboard mounted thereon, a front and a rear panels adjacent to two opposing sides of the bottom portion to form a receiving space therebetween; and

at least onetwo apposed hard drives as the first access unit installed in an upper portion of the receiving space, above the floppy drive and the compact disk drive instead of stacking beneath the second access unit;

thereby allowing air entering inside the case to flow and deliver heat from the front to the back of the case through the heat dissipation channel.

2. (Cancelled)

3. (Cancelled)

4. (Previously presented) The arrangement of Claim 1, wherein the second access unit is installed inside the case to be mounted to the front panel.

5. (Original) The arrangement of Claim 4, wherein the second access unit includes a 3.5" floppy disk or a compact disk drive.

6. (Previously presented) The arrangement of Claim 1, further comprising a plurality of connectors with various pins, a heat dissipation device and a power supply installed on the rear panel.

7. (Previously presented) The arrangement of Claim 1, further comprising a pair of support members extending between the front and rear panels, wherein the support members form a space for receiving the first access unit therein.

8. (Currently amended) The arrangement of Claim 1, wherein the first access unit includes a box member and the hard drives disposed in the box member.

9. (Original) The arrangement of Claim 8, wherein the box member includes a plurality of connection members formed along a periphery thereof to be fitted with the support members.

10. (Original) The arrangement of Claim 8, wherein the box member includes a terminal at one end thereof.
